

Lab2Q2

IT26102484

M.A.F. AKEELA

The screenshot displays a Windows command prompt window and a Notepad++ text editor. The command prompt shows the execution of a Java program, resulting in the output: "Radius of the circular fence = 6.363636363636364". The Notepad++ editor shows the source code for the Java program, which calculates the radius of a circular fence based on the side length of a square fence.

```
C:\Windows\System32\cmd.exe

C:\Users\user\Desktop\Lab2>javac IT26102484Lab2Q2.java

C:\Users\user\Desktop\Lab2>java IT26102484Lab2Q2
Radius of the circular fence = 6.363636363636364

C:\Users\user\Desktop\Lab2>
```

```
public class IT26102484Lab2Q2 {
    public static void main(String[] args) {
        // Side length of the square fence
        double sideLength = 10.0;

        // Value of PI given in the hints
        double pi = 22.0 / 7.0; // or 3.14

        // Total rope length = Perimeter of square
        double ropeLength = 4 * sideLength;

        // Circumference = 2 * PI * radius
        // Therefore, radius = ropeLength / (2 * PI)
        double radius = ropeLength / (2 * pi);

        // Output the result
        System.out.println("Radius of the circular fence = " + radius);
    }
}
```

Windows taskbar at the bottom shows the date and time as 7:57 AM on 10/2/2026, and the weather as 78°F Mostly clear.
